- Support and resistance level- The support and resistance (S&R) are specific price points on a chart expected to attract the maximum amount of either buying or selling. Support refers to prices on a chart that tend to act as a floor by preventing the price of an asset from being pushed downward. Support is a price level where a downtrend can be expected to pause due to a concentration of demand or buying interest. As the price of assets or securities drops, demand for the shares increases, thus forming the support line.
- Meanwhile, resistance zones arise due to selling interest when prices have increased. The support price is a price at which one can expect more buyers than sellers. Likewise, the resistance price is a price at which one can expect more sellers than buyers.
- Target- A target price is an estimate of the future price of a stock. The target price is the price that is expected to reach in the target period.
- Stop Loss- Stop-loss is a method used by an investor to limit his losses. It works as an automatic order given by the investor to his broker to sell a security as soon as it reaches a certain predetermined price.
